

Beck and Katz (2014): Table 2, Column 1 replication

Jeff Lewis

11/26/2017

I grabbed the archived datafile from <https://dataverse.harvard.edu/dataset.xhtml?persistentId=doi:10.7910/DVN/27269> . I then fit the models various ways. A summary table of rounded coefficients appears at the end.

```
library(tidyverse)
```

```

```
library(haven)
```

```
dat <- read_dta("garrett1998.dta")
```

Here column one using LSDV:

```
m1 <- lm(gdp ~ 0 + demand + trade + capmob + oild + per6673 +
         corp + leftlab + clint + as.factor(country) , data=dat)
summary(m1)
```

```
##
```

```
## Call:
```

```
## lm(formula = gdp ~ 0 + demand + trade + capmob + oild + per6673 +
```

```
##     corp + leftlab + clint + as.factor(country), data = dat)
```

```
##
```

```
## Residuals:
```

```
##      Min       1Q   Median       3Q      Max
```

```
## -6.0196 -1.1798 -0.0052  1.2802  5.5709
```

```
##
```

```
## Coefficients:
```

```
##              Estimate Std. Error t value Pr(>|t|)
## demand           0.006683   0.001106   6.040 4.17e-09 ***

## Residual standard error: 1.905 on 328 degrees of freedom
## Multiple R-squared: 0.7937, Adjusted R-squared: 0.7798
## F-statistic: 57.35 on 22 and 328 DF, p-value: < 2.2e-16

```

Here is usual centering approach:

```

m2 <- lm(gdp ~ 0 + demand + trade + capmob + oild + per6673 +
         corp + leftlab + clint,
         data=dat %>% group_by(country) %>% mutate_at(vars(gdp,demand,trade,capmob,
         oild,per6673,corp,
         leftlab,clint),
         function(x) x - mean(x)))
summary(m2)

```

```

##
## Call:
## lm(formula = gdp ~ 0 + demand + trade + capmob + oild + per6673 +
##     corp + leftlab + clint, data = dat %>% group_by(country) %>%
##     mutate_at(vars(gdp, demand, trade, capmob, oild, per6673,
##     corp, leftlab, clint), function(x) x - mean(x)))
##
## Residuals:
##     Min       1Q   Median       3Q      Max
## -6.0196 -1.1798 -0.0052  1.2802  5.5709
##
## Coefficients:
##             Estimate Std. Error t value Pr(>|t|)
## demand    0.006683   0.001084   6.168 1.95e-09 ***
## trade     -0.015914   0.015288  -1.041  0.2986
## capmob    -0.165178   0.219003  -0.754  0.4512
## oild      -8.536994   6.198994  -1.377  0.1694
## per6673   1.681897   0.322513   5.215 3.19e-07 ***
## corp       0.009285   0.611559   0.015  0.9879

##
## Residual standard error: 1.866 on 342 degrees of freedom
## Multiple R-squared: 0.336, Adjusted R-squared: 0.3204
## F-statistic: 21.63 on 8 and 342 DF, p-value: < 2.2e-16

```

Here is the center-and-then-construct-the-interaction-approach:

```
m3 <- lm(gdp ~ 0 + demand + trade + capmob + oild + per6673 +
        corp + leftlab + leftlab*corp ,
        data=dat %>% group_by(country) %>% mutate_at(vars(gdp,demand,trade,capmob,
        oild,per6673,corp,
        leftlab,clint),
        function(x) x - mean(x)))
summary(m3)
```

```
##
## Call:
## lm(formula = gdp ~ 0 + demand + trade + capmob + oild + per6673 +
##     corp + leftlab + leftlab * corp, data = dat %>% group_by(country) %>%
##     mutate_at(vars(gdp, demand, trade, capmob, oild, per6673,
##                   corp, leftlab, clint), function(x) x - mean(x)))
##
## Residuals:
##      Min       1Q   Median       3Q      Max
## -6.1020 -1.2494  0.0294  1.2454  5.5448
##
## Coefficients:
##              Estimate Std. Error t value Pr(>|t|)
## demand           0.00656   0.00109   6.020 4.5e-09 ***
## trade            -0.01827   0.01534  -1.190  0.235

```

Here the point estimates after applying my best guess as to how the publisher rounded in the published table:

```
res <- apply(cbind(coef(m1)[1:8],coef(m2),coef(m3)),c(1,2),
            function(x) {
              rt <- as.integer(cut(abs(x),c(0,0.01,1,Inf)))
              signif(x,rt)
            })
res <- cbind(res,c(0.007,-0.018,-0.20,-7.86,1.76,
                0.54,-0.075,0.10))
colnames(res) <- c("LSDV", "CenterAll", "CenterThenInt", "Reported")
res
```

```
##           LSDV CenterAll CenterThenInt Reported
## demand   0.007   0.007   0.007   0.007
## trade   -0.016  -0.016  -0.018  -0.018
## capmob  -0.170  -0.170  -0.190  -0.200
## oild    -8.540  -8.540  -7.860  -7.860
## per6673  1.680   1.680   1.760   1.760
## corp     0.009   0.009   0.540   0.540
```

```
## leftlab -0.850  -0.850  -0.075  -0.075
## clint   0.310   0.310   0.097   0.100
```
